Some inequalities in the interface between harmonic analysis and differential equations

MATEUS SOUSA^{*†}

We will discuss a little about sharp versions of the so-called Strichartz inequalities for dispersive partial differential equations. The plan is to introduce the most famous cases of these inequalities (Schrödinger, wave and Klein-Gordon equation), explain their connection to Fourier restriction problems and present some recent results about sharp versions of the estimates.

The idea is for the talk to be accessible to a broad audience, but to better enjoy the presentation some basic knowledge about the Fourier transform will be necessary.
