

# Mathematics Subject Classification 2000

## Mathematics Subject Classification 2000 (MSC2000)

This is a completely revised version of the MSC, prepared collaboratively in the editorial offices of MR and Zentralblatt MATH. It replaces the 1991 MSC and is effective (in MR) with the January 2000 issue (2000a).

While in many areas in the MSC there are only very small changes, others have been expanded significantly, and in some areas there is an altogether new classification. The major changes are as follows: Section 04 has been eliminated; 03E will now be used for items previously classified in 04. A new section, 37, has been created for Dynamical systems and ergodic theory; as a result Section 58F has been eliminated. Also in Section 58, 58G has been completely revised and now appears as 58J. The new Section 74, Mechanics of deformable solids, is a completely revised version of Section 73, which has been eliminated. The areas covered by Sections 90 and 92 have been reorganized into Sections 90, 91 and 92. Sections 90B and 90C remain essentially unchanged. The new Section 91A replaces 90D and 91B replaces 90A. The other subsections of 91 replace the old subsections 92G, H, J and K. Sections 92B, C, D, and E remain essentially unchanged. MSC2000 contains a new section, 97, for Mathematics education. This will be used only as a secondary classification in MR. Other sections with significant additions or reorganization include 14, 22, 32, 34, 46, 47, 53, and 65.

To help users of the MSC, conversion tables have been constructed and are available on the AMS web site, [www.ams.org](http://www.ams.org). These give, for each 1991 classification that does not appear in MSC2000, the classification(s) in MSC2000 that are most likely to be used for items that would previously have been classified using the old classification, and, for each new classification in MSC2000, the classification(s) in the 1991 MSC that are most likely to have been used earlier for items classified using the new classification.

## Instructions for using the Mathematics Subject Classification 2000

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help readers find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system

is used. A paper or book should be listed under the classification where it will receive the broadest attention from readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

For every paper or book listed, MR chooses precisely one “primary” classification, which is simply the code for the section (MSC entry) in which the item will be located. This section should be the one that covers the principal contribution. When an item contains several principal contributions in different areas, the primary classification should cover the “most important” among them. A paper or book may receive one or several “secondary” classifications (or “cross-references”) to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The “primary” principal contribution is meant to be the one including the most important part of the work actually done in the item under consideration. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is, say, at present only of interest to computer scientists, belongs primarily in 05C with a cross-reference in 68; conversely, a paper whose overall content lies mainly in computer science should receive a primary classification in 68, even if it makes heavy use of graph theory and proves several new graph-theoretic results along the way.

There are two types of cross-references given after many classifications in the list. The first type is of the form “{For A, see X}”; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form “[See also . . .]”, “[See mainly . . .]”, etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the item at hand.

<b>00–XX</b>	<b>GENERAL</b>	00A20	Dictionaries and other general reference works

- 08A70 Applications of universal algebra in computer science
- 08A72 Fuzzy algebraic structures

08A99	None of the above, but in this section	11B68	Bernoulli and Euler numbers and polynomials
<b>08Bxx</b>	<b>Varieties [See also 03C05]</b>	11B73	Bell and Stirling numbers
08B05	Equational logic, Mal'cev (Mal'tsev) conditions	11B75	Other combinatorial number theory
08B10	Congruence modularity, congruence distributivity	11B83	Special sequences and polynomials
08B15	Lattices of varieties	11B85	Automata sequences
08B20	Free algebras	11B99	None of the above, but in this section
08B25	Products, amalgamated products, and other kinds of limits and colimits [See also 18A30]	<b>11Cxx</b>	<b>Polynomials and matrices</b>
08B26	Subdirect products and subdirect irreducibility	11C08	Polynomials [See also 13F20]
08B30	Injectives, projectives	11C20	Matrices, determinants [See also 15A36]
08B99	None of the above, but in this section	11C99	None of the above, but in this section
<b>08Cxx</b>	<b>Other classes of algebras</b>	<b>11Dxx</b>	<b>Diophantine equations [See also 11Gxx, 14Gxx]</b>
08C05	Categories of algebras [See also 18C05]	11D04	Linear equations
08C10	Axiomatic model classes [See also 03Cxx, in particular 03C60]	11D09	Quadratic and bilinear equations
08C15	Quasivarieties	11D25	Cubic and quartic equations
08C99	None of the above, but in this section	11D41	Higher degree equations; Fermat's equation
<b>11–XX</b>	<b>NUMBER THEORY</b>	11D45	Counting solutions of Diophantine equations
11–00	General reference works (handbooks, dictionaries, bibliographies, etc.)	11D57	Multiplicative and norm form equations
11–01	Instructional exposition (textbooks, tutorial papers, etc.)	11D59	Thue-Mahler equations
11–02	Research exposition (monographs, survey articles)	11D61	Exponential equations
11–03	Historical (must also be assigned at least one classification number from Section 01)	11D68	Rational numbers as sums of fractions
11–04	Explicit machine computation and programs (not the theory of computation or programming)	11D72	Equations in many variables [See also 11P55]
11–06	Proceedings, conferences, collections, etc.	11D75	Diophantine inequalities [See also 11J25]
<b>11Axx</b>	<b>Elementary number theory {For analogues in number fields, see 11R04}</b>	11D79	Congruences in many variables
11A05	Multiplicative structure; Euclidean algorithm; greatest common divisors	11D85	Representation problems [See also 11P55]
11A07	Congruences; primitive roots; residue systems	11D88	$p$ -adic and power series fields
11A15	Power residues, reciprocity	11D99	None of the above, but in this section
11A25	Arithmetic functions; related numbers; inversion formulas	<b>11Exx</b>	<b>Forms and linear algebraic groups [See also 19Gxx] {For quadratic forms in linear algebra, see 15A63}</b>
11A41	Primes	11E04	Quadratic forms over general fields
11A51	Factorization; primality	11E08	Quadratic forms over local rings and fields
11A55	Continued fractions {For approximation results, see 11J70} [See also 11K50, 30B70, 40A15]	11E10	Forms over real fields
11A63	Radix representation; digital problems {For metric results, see 11K16}	11E12	Quadratic forms over global rings and fields
11A67	Other representations	11E16	General binary quadratic forms
11A99	None of the above, but in this section	11E20	General ternary and quaternary quadratic forms; forms of more than two variables
<b>11Bxx</b>	<b>Sequences and sets</b>	11E25	Sums of squares and representations by other particular quadratic forms
11B05	Density, gaps, topology	11E39	Bilinear and Hermitian forms
11B13	Additive bases [See also 05B10]	11E41	Class numbers of quadratic and Hermitian forms
11B25	Arithmetic progressions [See also 11N13]	11E45	Analytic theory (Epstein zeta functions; relations with automorphic forms and functions)
11B34	Representation functions	11E57	Classical groups [See also 14Lxx, 20Gxx]
11B37	Recurrences {For applications to special functions, see 33–XX}	11E70	$K$ -theory of quadratic and Hermitian forms
11B39	Fibonacci and Lucas numbers and polynomials and generalizations	11E72	Galois cohomology of linear algebraic groups [See also 20G10]
11B50	Sequences (mod $m$ )	11E76	Forms of degree higher than two
11B57	Farey sequences; the sequences $1^k, 2^k, \dots$	11E81	Algebraic theory of quadratic forms; Witt groups and rings [See also 19G12, 19G24]
11B65	Binomial coefficients; factorials; $q$ -identities [See also 05A10, 05A30]	11E88	Quadratic spaces; Clifford algebras [See also 15A63, 15A66]
		11E95	$p$ -adic theory
		11E99	None of the above, but in this section

- 11Fxx Discontinuous groups and automorphic forms** [See also 11R39, 11S37, 14Gxx, 14Kxx, 22E50, 22E55, 30F35, 32Nxx] {For relations with quadratic forms, see 11E45}

- 11H46 Products of linear forms
- 11H50 Minima of forms
- 11H55 Quadratic forms (reduction theory, extreme forms, etc.)
- 11H56 Automorphism groups of lattices
- 11H60 Mean value and transfer theorems
- 11H71 Relations with coding theory
- 11H99 None of the above, but in this section
- 11Jxx Diophantine approximation, transcendental number theory** [See also 11K60]
- 11J04 Homogeneous approximation to one number
- 11J06 Markov and Lagrange spectra and generalizations
- 11J13 Simultaneous homogeneous approximation, linear forms
- 11J17 Approximation by numbers from a fixed field
- 11J20 Inhomogeneous linear forms
- 11J25 Diophantine inequalities [See also 11D75]
- 11J54 Small fractional parts of polynomials and generalizations
- 11J61 Approximation in non-Archimedean valuations
- 11J68 Approximation to algebraic numbers
- 11J70 Continued fractions and generalizations [See also 11A55, 11K50]
- 11J71 Distribution modulo one [See also 11K06]
- 11J72 Irrationality; linear independence over a field
- 11J81 Transcendence (general theory)
- 11J82 Measures of irrationality and of transcendence
- 11J83 Metric theory
- 11J85 Algebraic independence; Gelfond's method
- 11J86 Linear forms in logarithms; Baker's method
- 11J89 Transcendence theory of elliptic and abelian functions
- 11J91 Transcendence theory of other special functions
- 11J93 Transcendence theory of Drinfel'd and  $t$ -modules

- 11J95 Results involving abelian varieties
- 11J97 Analogues of methods in Nevanlinna theory (work of Vojta et al.)
- 11J99 None of the above, but in this section
- 11Kxx Probabilistic theory: distribution modulo 1; metric theory of algorithms**
- 11K06 General theory of distribution modulo 1 [See also 11J71]
- 11K16 Normal numbers, radix expansions, etc. [See also 11A63]
- 11K31 Special sequences
- 11K36 Well-distributed sequences and other variations
- 11K38 Irregularities of distribution, discrepancy [See also 11Nxx]
- 11K41 Continuous,  $p$ -adic and abstract analogues
- 11K45 Pseudo-random numbers; Monte Carlo methods
- 11K50 Metric theory of continued fractions [See also 11A55, 11J70]
- 11K55 Metric theory of other algorithms and expansions; measure and Hausdorff dimension [See also 11N99, 28Dxx]
- 11K60 Diophantine approximation [See also 11Jxx]
- 11K65 Arithmetic functions [See also 11Nxx]
- 11K70 Harmonic analysis and almost periodicity
- 11K99 None of the above, but in this section
- 11Lxx Exponential sums and character sums {For finite fields, see 11Txx}**
- 11L03 Trigonometric and exponential sums, general
- 11L05 Gauss and Kloosterman sums; generalizations
- 11L07 Estimates on exponential sums
- 11L10 Jacobsthal and Brewer sums; other complete character sums
- 11L15 Weyl sums
- 11L20 Sums over primes
- 11L26 Sums over arbitrary intervals
- 11L40 Estimates on character sums
- 11L99 None of the above, but in this section
- 11Mxx Zeta and  $L$ -functions: analytic theory**
- 11M06  $\zeta(s)$  and  $L(s, \chi)$
- 11M20 Real zeros of  $L(s, \chi)$ ; results on  $L(1, \chi)$
- 11M26 Nonreal zeros of  $\zeta(s)$  and  $L(s, \chi)$ ; Riemann and other hypotheses
- 11M35 Hurwitz and Lerch zeta functions
- 11M36 Selberg zeta functions and regularized determinants; applications to spectral theory, Dirichlet series, Eisenstein series, etc. Explicit formulas
- 11M38 Zeta and  $L$ -functions in characteristic  $p$
- 11M41 Other Dirichlet series and zeta functions {For local and global ground fields, see 11R42, 11R52, 11S40, 11S45; for algebro-geometric methods, see 14G10; see also 11E45, 11F66, 11F70, 11F72}
- 11M45 Tauberian theorems [See also 40E05]
- 11M99 None of the above, but in this section
- 11Nxx Multiplicative number theory**
- 11N05 Distribution of primes
- 11N13 Primes in progressions [See also 11B25]
- 11N25 Distribution of integers with specified multiplicative constraints
- 11N30 Turán theory [See also 30Bxx]
- 11N32 Primes represented by polynomials; other multiplicative structure of polynomial values
- 11N35 Sieves
- 11N36 Applications of sieve methods
- 11N37 Asymptotic results on arithmetic functions
- 11N45 Asymptotic results on counting functions for algebraic and topological structures
- 11N56 Rate of growth of arithmetic functions
- 11N60 Distribution functions associated with additive and positive multiplicative functions
- 11N64 Other results on the distribution of values or the characterization of arithmetic functions
- 11N69 Distribution of integers in special residue classes
- 11N75 Applications of automorphic functions and forms to multiplicative problems [See also 11Fxx]
- 11N80 Generalized primes and integers
- 11N99 None of the above, but in this section
- 11Pxx Additive number theory; partitions**
- 11P05 Waring's problem and variants
- 11P21 Lattice points in specified regions
- 11P32 Goldbach-type theorems; other additive questions involving primes
- 11P55 Applications of the Hardy-Littlewood method [See also 11D85]
- 11P70 Inverse problems of additive number theory
- 11P81 Elementary theory of partitions [See also 05A17]
- 11P82 Analytic theory of partitions
- 11P83 Partitions; congruences and congruential restrictions
- 11P99 None of the above, but in this section
- 11Rxx Algebraic number theory: global fields {For complex multiplication, see 11G15}**
- 11R04 Algebraic numbers; rings of algebraic integers
- 11R06 PV-numbers and generalizations; other special algebraic numbers
- 11R09 Polynomials (irreducibility, etc.)
- 11R11 Quadratic extensions
- 11R16 Cubic and quartic extensions
- 11R18 Cyclotomic extensions
- 11R20 Other abelian and metabelian extensions
- 11R21 Other number fields
- 11R23 Iwasawa theory
- 11R27 Units and factorization
- 11R29 Class numbers, class groups, discriminants
- 11R32 Galois theory
- 11R33 Integral representations related to algebraic numbers; Galois module structure of rings of integers [See also 20C10]
- 11R34 Galois cohomology [See also 12Gxx, 16H05, 19A31]
- 11R37 Class field theory
- 11R39 Langlands-Weil conjectures, nonabelian class field theory [See also 11Fxx, 22E55]
- 11R42 Zeta functions and  $L$ -functions of number fields [See also 11M41, 19F27]

- 11R44 Distribution of prime ideals [See also 11N05]
- 11R45 Density theorems
- 11R47 Other analytic theory [See also 11Nxx]
- 11R52 Quaternion and other division algebras:  
arithmetic, zeta functions
- 11R54 Other algebras and orders, and their zeta and  $L$ -  
functions [See also 11S45, 16H05, 16Kxx]
- 11R56 Adèle rings and groups
- 11R58 Arithmetic theory of algebraic function fields  
[See also 14–XX]
- 11R60 Cyclotomic function fields (class groups,  
Bernoulli objects, etc.)
- 11R65 Class groups and Picard groups of orders
- 11R70  $K$ -theory of global fields [See also 19Fxx]
- 11R80 Totally real and totally positive fields  
[See also 12J15]
- 11R99 None of the above, but in this section
- 11Sxx Algebraic number theory: local and  $p$ -adic  
fields**
- 11S05 Polynomials
- 11S15 Ramification and extension theory
- 11S20 Galois theory
- 11S23 Integral representations
- 11S25 Galois cohomology [See also 12Gxx, 16H05]
- 11S31 Class field theory;  $p$ -adic formal groups  
[See also 14L05]
- 11S37 Langlands-Weil conjectures, nonabelian class  
field theory [See also 11Fxx, 22E50]
- 11S40 Zeta functions and  $L$ -functions [See also 11M41,  
19F27]
- 11S45 Algebras and orders, and their zeta functions  
[See also 11R52, 11R54, 16H05, 16Kxx]
- 11S70  $K$ -theory of local fields [See also 19Fxx]
- 11S80 Other analytic theory (analogues of beta and  
gamma functions,  $p$ -adic integration, etc.)
- 11S85 Other nonanalytic theory
- 11S90 Prehomogeneous vector spaces
- 11S99 None of the above, but in this section
- 11Txx Finite fields and commutative rings (number-  
theoretic aspects)**
- 11T06 Polynomials
- 11T22 Cyclotomy
- 11T23 Exponential sums
- 11T24 Other character sums and Gauss sums
- 11T30 Structure theory
- 11T55 Arithmetic theory of polynomial rings over finite  
fields
- 11T60 Finite upper half-planes
- 11T71 Algebraic coding theory; cryptography
- 11T99 None of the above, but in this section
